Historical events

2 historical event record(s) are stored for W002. Each item below is copied from the synthetic events table.

Historical event at 1782.1 m in Formation-B. Event type: HIGH_TORQUE. Severity: MEDIUM. Observation: Torque increased significantly while drilling through the interval.. Cause: Increased formation resistance and poor hole-cleaning conditions.. Mitigation: Adjusted WOB/RPM and

improved circulation parameters.. Outcome: Torque returned toward the normal operating range..

Historical event at 2904.0 m in Formation-D. Event type: MUD_LOSS. Severity: HIGH. Observation: Mud volume loss was observed during drilling.. Cause: Losses into a permeable or fractured formation interval.. Mitigation: Reduced pump rate and applied controlled lost-circulation treatment.. Outcome: Mud losses stabilized and drilling continued..

Source statement

All well, formation, drilling-log, and event values in this PDF were copied from the local NWIS synthetic PostgreSQL database. The document does not add wells, depths, causes, mitigations, or outcomes that are absent from those tables.
